1 Beginners

1.1 Wisdom

Talking about Wisdom, the first things to focus on are Attack Speed (put there points until you reach 4.00 Attack Speed, so you will get the damage buff in map) and most of all Critical (to max 80/80 as soon as possible). After that you can start using your points on what you think you need at that moment. Generally it's defensive stats such as HP, Armor and Resistances or eventually some Steam if you feel you run out of resources too quickly.
